

Harshita

Step 1: Print time → hours
33 minutes = $\frac{33}{60}$ hours = 0.55 hours
37 seconds = $\frac{37}{3600}$ hours ≈ 0.01028 hours
Total: 0.55 + 0.01028 ≈ 0.56028

Step 2: Each Component
Design cost: $30 \times 2 = \$60$
Material cost: Cost per gram
Spool of PLA = \$30 $\frac{30}{500} = 0.06$
 $0.06 \cdot 11.74 = 0.7044$
Production cost
 $0.8 \cdot 0.56028 \approx 0.4482$

STEP 3: Total Calculation
Design cost + Material cost + Production cost
 $60 + 0.7044 + 0.4482 \approx 61.1526$
